

Energy Grading

5	<ul style="list-style-type: none"> • Evidence of locally generated energy from renewable sources – primary source. • Evidence of established renewable ‘feed in’ schemes. • Evidence of established community sharing schemes. • Access to National renewable energy as a secondary source. • Significant evidence and utilisation of energy saving practices and devices.
4	<ul style="list-style-type: none"> • Evidence of locally generated energy from renewable sources – secondary source. • Evidence of prospective renewable ‘feed in’ schemes. • Some evidence of initiation of community sharing schemes. • Access to National renewable energy as a primary source. • Evidence and utilisation of energy saving practices and devices.
3	<ul style="list-style-type: none"> • Some Evidence of locally generated energy technology from renewable sources. • Some evidence of initiation of community sharing schemes. • Access to National renewable energy as a primary source. • Some evidence and utilisation of energy saving practices and devices.
2	<ul style="list-style-type: none"> • Isolated examples of locally generated energy technology from renewable sources. • Demonstrates effective energy conservation measures. • Access to National renewable energy as a primary source. • Isolated examples of energy saving practices and devices.
1	<ul style="list-style-type: none"> • Access to National renewable energy as a primary source, though if not available energy saving measures must be clear. • Isolated examples of energy saving practices and devices.
